

Seat Fixing Installation Guide

1. Some of our seating ranges have downward facing ferrules that can be secured with threaded rod on the underside for permanent fixing to the substrate.
2. Polyurethane adhesives can also be used. This ensures that the seats are stable and safe to use but can also be removed or repositioned with greater ease than using threaded rod.

Seats with Embedded Ferrules:

- Pod Seating Range
 - Hub Seating Range
 - Pebble Seating Range
 - Boulder Seating Range
 - Segment Seating Range
 - Flex Seating Range
- Please contact us should you need ferrules embedded into any of our other seating ranges.
